

Advanced Automation and Control

Optimization Part

Surname..... Name.....

Thursday 11th July, 2019

Exercise 1

1. Rewrite the optimization problem in **standard form**

2. Depict the tree associated to the MILP and write down the problem at node 0 (the relaxation of the original MILP problem)

3. Simplex algorithm at node 0

(a) Write the optimization problem for Phase 1

(b) Solve Phase 1

A blank 3x10 grid for Phase 1 simplex tableau. The grid consists of 3 rows and 10 columns. The first column is defined by two vertical lines, and the first two rows are defined by two horizontal lines, forming a header area for the tableau.

(c) Simplex algorithm **Phase 2** (complete from left to right and from up to down)

A blank 3x10 grid for Phase 2 simplex tableau. The grid consists of 3 rows and 10 columns. The first column is defined by two vertical lines, and the first two rows are defined by two horizontal lines, forming a header area for the tableau.

A blank 3x10 grid for Phase 2 simplex tableau. The grid consists of 3 rows and 10 columns. The first column is defined by two vertical lines, and the first two rows are defined by two horizontal lines, forming a header area for the tableau.

(d) The optimal cost is

(e) The optimal solution is $x =$

(f) Is this solution feasible for the original MILP (Yes or No)?

(g) Is this solution optimal for the original MILP (Yes or No)?

4. Write down the problem at node 1

5. Simplex algorithm at node 1

(a) Write the optimization problem for Phase 1

(b) Solve Phase 1

(c) Simplex algorithm **Phase 2** (complete from left to right and from up to down)

(d) The optimal cost is

(e) The optimal solution is $x =$

(f) Is this solution feasible for the original MILP (Yes or No)?

(g) Is this solution optimal for the original MILP (Yes or No)?

6. Write down the problem at node 2

7. Simplex algorithm at node 2

(a) Write the optimization problem for Phase 1

(b) Solve Phase 1

(c) The optimization problem at node 2 is

(d) After examining nodes 0, 1 and 2, one can conclude that

i. the optimal cost for the MILP is

ii. the optimal solution for the MILP is $x =$

3. Write down the final **linear** objective function

4. Write down all the constraints

Exercise 3

1. Indicate if the cost function is convex (motivate the answer).

2. Depict the feasibility domain of the problem.

3. Indicate if the optimisation problem is convex (motivate the answer).

Exercise 4
